

Press release

TcLand Expression's Liver graft Tolerance eXpression (L-TolX) *in-vitro* molecular diagnostic blood test interim clinical data to be presented at the American Transplant Congress (ATC) in San Diego, from May 1st to 5th, 2010

Nantes, France, April 27th, 2010 – TcLand Expression SA, a global leader in the field of gene expression biomarkers in allo- and auto-immunity, today announced that Dr Alberto Sanchez-Fueyo, lead Principal Investigator from the “Hospital Clinic” in Barcelona (Spain), will present the interim data from a clinical validation study of the Liver Tolerance Expression (L-TolX) *in-vitro* molecular diagnostic blood test, at the American Transplant Congress (ATC) to be held in San Diego from May 1st to 5th, 2010. This work (*please refer to abstract n° 517*) will be presented in partnership with the “Institut d’Investigacions Biomèdiques August Pi i Sunyer” (IDIBAPS) in Barcelona.

TcLand Expression's biomarker programs

TcLand Expression has gene expression biomarkers in solid organ transplantation currently in clinical validation as well as gene expression companion diagnostics being developed in Immune Mediated Disorders. The L-TolX blood test is a multigene molecular diagnostic tool used to aid in the identification of liver transplant recipients with stable allograft function for whom immunosuppression withdrawal is being considered. The L-TolX blood test started its international multicentre clinical validation phase in 2007 and the follow-up of the patients identified as tolerant, i.e. free of immunosuppressive drugs, has now exceeded 18-24 months for the majority.

TcLand Expression

TcLand Expression is an acknowledged pioneer in the discovery, the development and the validation of gene expression biomarkers for unmet medical needs in transplantation and auto-immune disease. The company benefits from an exceptional scientific and clinical environment.
